

Our stand at the Berlin Congress Center (BCC) received tens of visitors interested in the DPCM WSN toolset platform.

Accessible from a web interface, a live demo of a set of our tools showed people some of the current capabilities of the platform. A common feeling shared with those who visited us is that the DPCM toolset is able to make your live easier as a WSN designer.

Important feedback was received through talks and interaction with other participants and exhibition's attendees. Projects like DEWI and SITAC, representatives from academia and private companies like Polar showed interest in our achievements and future developments and extensions over the platform.

Last but not least, the WSN-DPCM Project was awarded with the Artemis JU Recognition Certificate during the closing session. Daniel Rodriguez (MTP) received the commemorative plaque from Mr. Alun Foster, Head of Dissemination ECSEL Joint Undertaking.

We thank the organization for the great event we enjoyed in Berlin
